

Ömer Faruk Erdem

SOFTWARE ENGINEERING STUDENT

Fourth-year software engineering student with internship experience at ASELSAN and in drone software, and machine learning work at TEKNOFEST and on Kaggle. Builds and ships end-to-end: mobile applications, on-device models, and live web systems with content panels their owners run themselves.

Pendik, İstanbul, Türkiye

LANGUAGES

Turkish — Native

English — B2 Level Certificate and B1 Level Certificate

CERTIFICATES AND TRAINING

Siber Vatan — Participant

National cybersecurity training program.

GEA Academy (formerly YEA) — Certificate of Participation

JUN 2024

A six-month online academy program. The company rebranded from Young Executive Academy (YEA) to Global Executive Academy (GEA) during the program.

Code Genius Event — Online Participation Certificate

APR 2024

Online event where participants from different companies shared their professional experiences.

EDUCATION

Bachelor's Degree — Software Engineering

Oct 2024 – Present

Firat University, Faculty of Engineering, Elazığ, Türkiye — fourth-year student

Coursework focused on software engineering, data mining, natural language processing, information systems and security, and mobile application development.

Erasmus+ Program — Informatics

Sep 2025 – Feb 2026

"George Emil Palade" University, Târgu Mureș, Romania

Awarded an Erasmus+ scholarship after passing the written and oral selection exams. Completed one full semester of informatics courses taught in English, with a credit-weighted average of 8.10 / 10.

Bachelor's Degree — Software Engineering

Sep 2023 – Jun 2024

Malatya Turgut Özal University, Malatya, Türkiye

GPA 3.55 / 4.00. Transferred to Firat University after the first year based on academic performance.

INTERNSHIPS

Technology Management and Digital Transformation Intern (REHİS)

Aug 2026 – Sep 2026

ASELSAN Elektronik Sanayi ve Ticaret A.Ş., Ankara, Türkiye

- Took over and continued an internal web application that guides users through completing long, structured corporate forms: automatic detection of the fields that must be filled, guided entry, suggestions reused from earlier answers, protection of the sections that may not be modified, session recovery and export.
- Rebuilt the AI assistant from scratch after finding the inherited implementation non-functional and incompatible with corporate information-security policy, and added a local layer that answers repetitive requests without leaving the machine, which noticeably cut response times.
- Added Turkish morphology and synonym handling so that different phrasings map to the correct field, and fixed field-marking, suggestion and interface layout defects.
- Isolated the AI layer behind a single integration point, made the core features work without any external connection, and migrated the application onto the organization's internal AI infrastructure.
- Proposed and built a second tool that solves the project-handover problem between interns and engineers, whose machines carry different Python, compiler and dependency versions: it analyses a project folder, detects the entry point and dependencies, and produces a self-contained package with generated install and run scripts. Ships with an embedded interpreter, has no third-party dependencies, and was validated against archived intern projects with batch scanning of a project tree.

Software Engineering Intern

Aug 2025 – Sep 2025

Mostaş Technology, İstanbul, Türkiye — aviation and space technologies

- Worked on software and embedded systems for agricultural drones, designing and optimizing Unreal Engine 5.2.1 simulation environments for flight and terrain testing.
- Developed an ESP32-C3-Mini-based embedded system to measure liquid flow rate and control pump operation.
- Developed interface components in C++/QML on QGroundControl for ground-station use.
- Supported drone hardware integration, soldering, cabling and calibration, and took part in field flight tests.

PROJECT EXPERIENCE

TEKNOFEST 2026 — Trendyol E-Commerce Competition

Jun 2026

Team FiraTech — Machine Learning & Model Development

Semantic matching of free-text search terms to catalogue products. Fine-tuned multilingual E5 sentence-embedding models with hard-negative mining and built a manually labeled gold set for offline evaluation, since the leaderboard allowed only a limited number of daily submissions. Two-person team, no advisor.

Datathon 2026 — Career Success Score Prediction

Jun 2026

Kaggle Machine Learning Competition — Regression, evaluated by MSE

Feature engineering plus word- and character-level TF-IDF with SVD over free-text comments; seven stacked models (Ridge, HistGradientBoosting, LightGBM, XGBoost, CatBoost, MLP, Extra Trees) with a Ridge meta-learner and Optuna tuning — out-of-fold MSE reduced from about 230 to 77. Identified a temporal distribution shift between the training and test sets and built a weighted validation scheme that reproduced leaderboard behaviour offline.

SignBridgeAI — Sign Language Recognition Mobile Application

Aug 2026 – Sep 2026

Kotlin · Jetpack Compose · MediaPipe · TensorFlow Lite · ML Kit

Android application that recognizes the ASL alphabet in real time entirely on-device, with ML Kit translation and no data collection. Trained the landmark classifier, fixed left-handed recognition, produced the full asset pipeline (adaptive icon, splash screen, brand palette) and prepared the signed Google Play release.

A PASO SEGURO — Mobile Application Development Project

2026

International Project — San Luis Potosí, Mexico

Java/Android application supporting UN Sustainable Development Goal 11, helping the local community experience nightlife safely. Interface designed in Figma, functionality developed in Android Studio, in collaboration with an international student team.

DC Energy — Corporate Website and Content Management Panel

Aug 2026

Next.js · Tailwind CSS · Cloudflare Workers · R2 — dcenergy.com.tr

Live corporate website with a password-protected panel that lets the client edit content and images without touching code; contact form with email notification, rate limiting, SEO, and domain, DNS and SSL setup.

Masal Bahçesi Preschool — Website and Management Panel

2026

Astro · Tailwind CSS · Cloudflare Workers · GitHub API

Static site plus a Turkish management panel (Cloudflare Worker writing through the GitHub API, HMAC-signed sessions, unit tests) that lets a non-technical owner publish announcements from a phone. In daily use.

VOLUNTEERING AND ACTIVITIES

COP31 — United Nations Climate Change Conference

Oct 2024 – Present

Volunteer Team — accepted after application and selection

Selected to take part in the volunteer team of a large international conference, working alongside participants and delegations from many countries.

Taekwondo — National Athlete (Milli Sporcu)

13 years

Türkiye Taekwondo Federation

Competed at national level for over a decade and supported the training of younger athletes and the organization of club competitions.
